

ReQUEST is a wireless, state-of-the-art remote control system that controls sports and recreational facilities lighting, and other electrical equipment. The components of the ReQUEST system include Remote Control Units (RCUs), TeleDirect operating system, and ControlStation software.

The ReQUEST remote control units can be controlled by the ControlStation™ software or recreation facilities scheduling/reservation software from others, and/or by simple touch-tone commands from any touch-tone telephone utilizing the TeleDirect™ operating system. The system sends and receives data via a sophisticated land and satellite communications infrastructure.

Now, by simply using ReQUEST.... all your sports and park facility lighting can be easily managed and remote-controlled from one central location. Even electronic bathroom door locks and sprinklers can be controlled by ReQUEST.

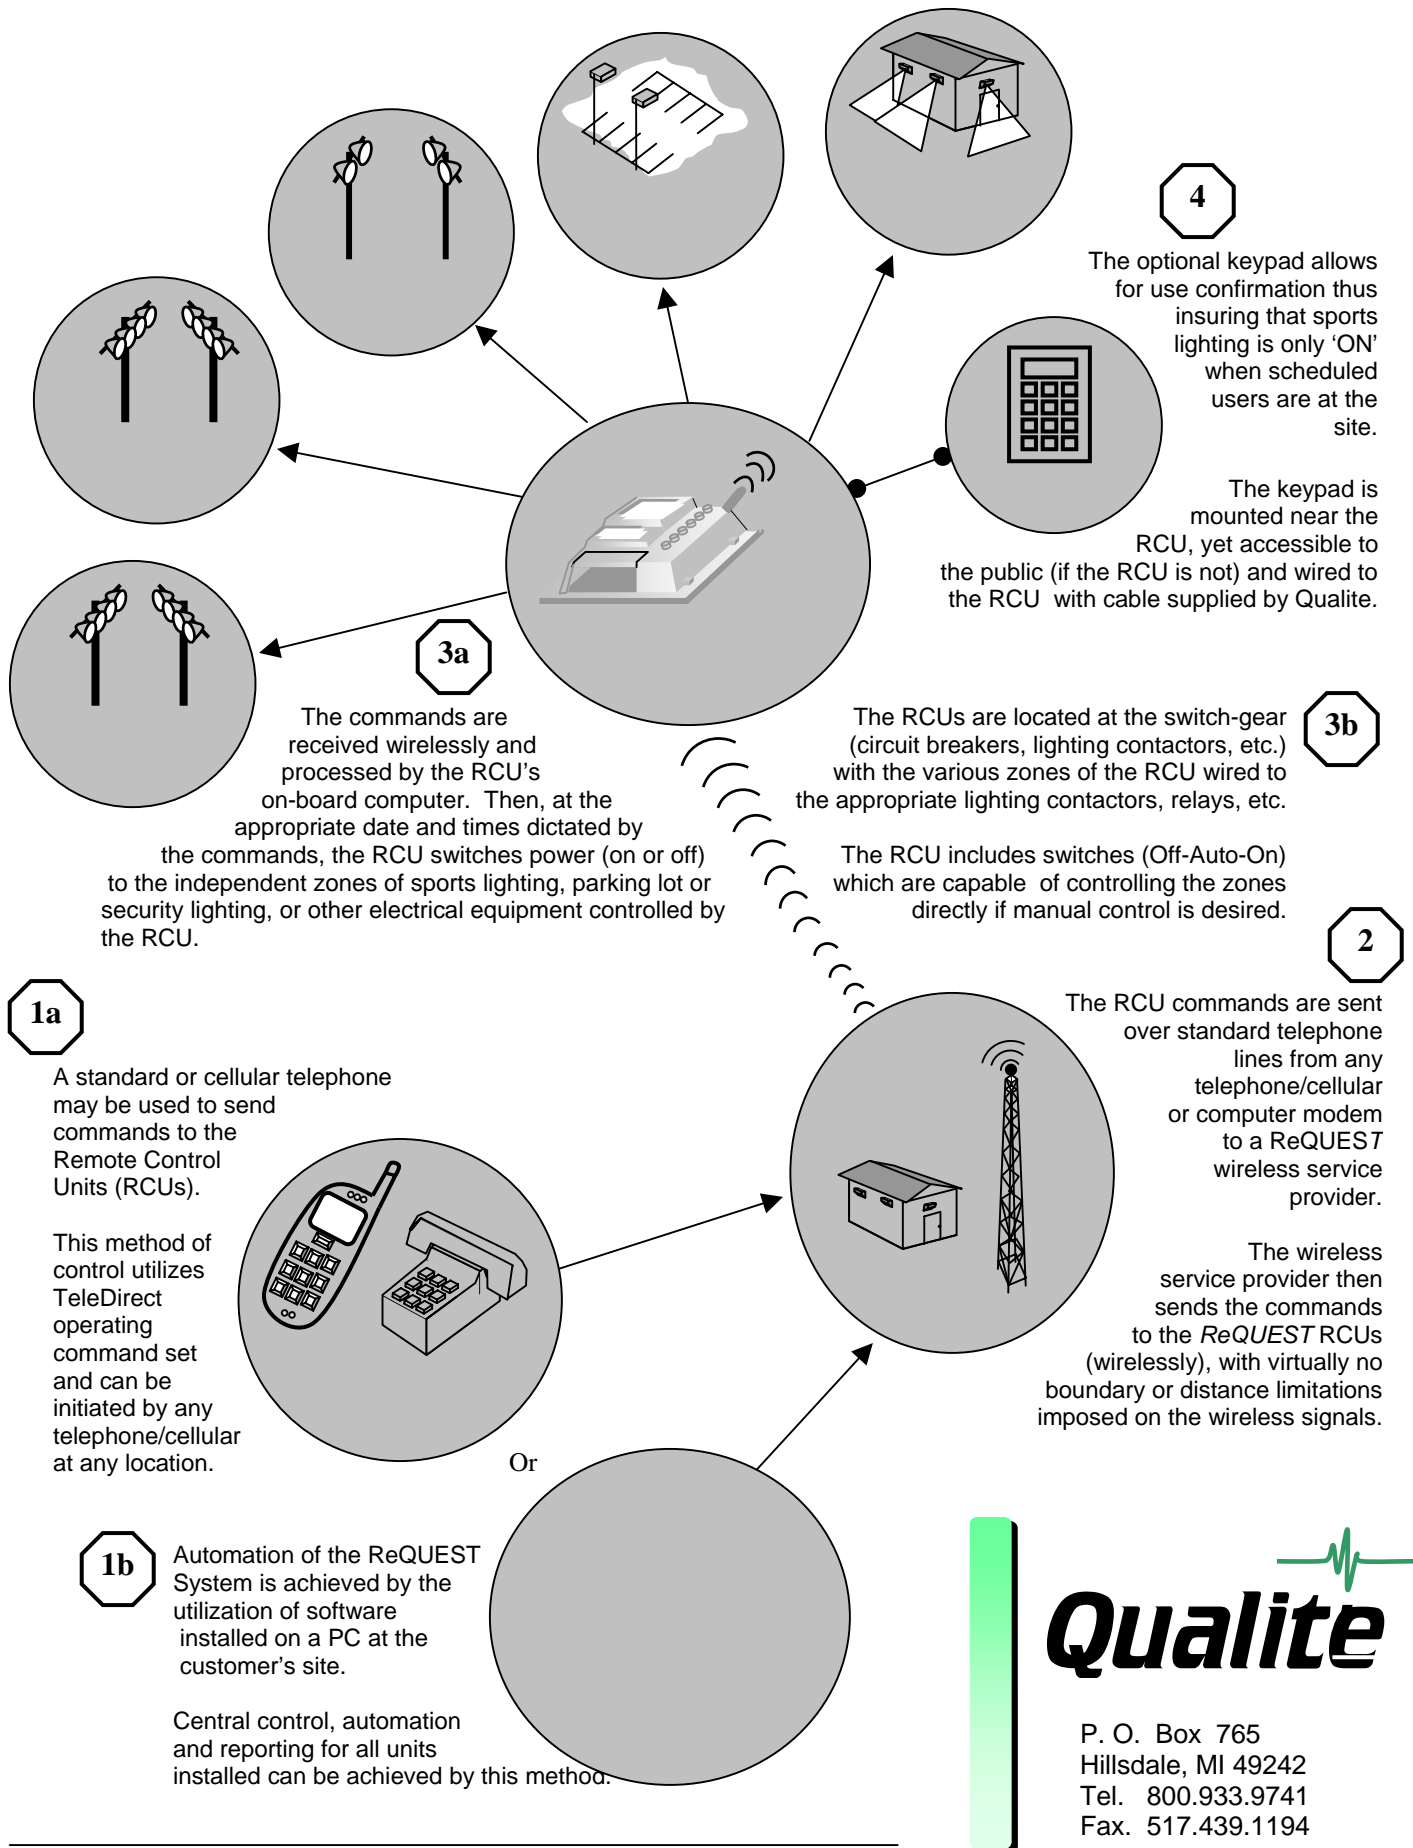

ReQUEST replaces inaccurate photocells, time clocks or more costly remote-control systems and can eliminate the expense and inconvenience incurred from personnel having to visit sites to turn on/off lights. Limit the wasted energy attributed to lights turned on too early or left on too late, or left on during rainouts, cancellations, and eliminate bad publicity and liability issues resulting from organizers failing to turn the lights on or off.

Features:

- Remote Switch-on-Demand
- No communication wires or cabling required at the ReQUEST units.
- Multiple zone capability with independent zone control or group zone control.
- Simple dial up touch-tone control override
- Automatically updated for changes in Daylight Savings and varying sunrise and sunset times.
- Control field/security/parking lot/restroom lighting, electronic door locks, etc.
- ReQUEST can be integrated with existing Facilities Reservation or Scheduling software packages.
- Control and/or Automate your sports lighting requirements from one central location
- Sports lighting is switched on and off based on customer reservations of the facilities/fields.
- Remotely turn off the sports lighting on any one of your fields with a simple phone call from any location (cellular OK) in cases of no shows or early-terminating games.
- Remotely turn off the sports lighting on any one or all of your parks in cases of rainouts or snowouts with one simple phone call from any location (cellular OK).
- The optional keypad control enables confirmed use of a field before the lights will turn on, whereby the user enters an access code indicating that he/she is at the site.
- Reports showing light usage by park and field for re-lamping and maintenance purposes
- Reports showing light usage by user/customer for lighting billing purposes
